

HEARD THE ONE ABOUT THE PAPERLESS OFFICE?

If yours is like most offices, there's a well-worn path between your copier and filing cabinets as piles of paper keep growing...

Search and Retrieve Documents

2-D Barcode

If you are new to document imaging you are in for a pleasant surprise.

Document Imaging is a rapidly emerging, cost saving technology that creates an electronic image of a document for a variety of purposes, including:

- re-printing archived documents in the exact format as the original
- convenient document forwarding via fax and email attachment
- rapid, efficient document storage and retrieval

Connected Technology's EZDocs solution helps businesses realize cost savings associated with time, lost productivity and additional services such as:

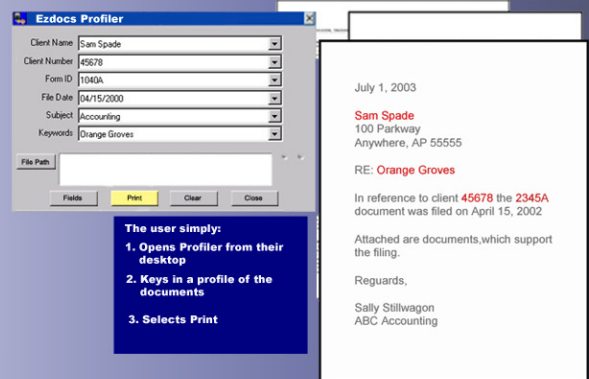

- potential errors with initial filing of documents
- potential errors with refiling of archived documents
- conveniently forward copies right from user's desk
- search/retrieve numerous documents all at once
- quickly locate required sections of documents without re-reading
- establish offsite storage for secure, redundant archival backup

EZdocs Profiler...

opens at the user's desktop and can distribute among other desktops. With document in hand, the user enters information in a profile, then prints the profile with their local desktop laser printer or digital copier. The user scans the document along with the printed profile sheet (like a fax cover page).

- The user simply:
1. Opens Profiler from their desktop
 2. Keys in a profile of the documents
 3. Selects Print

EZdocs Monitor...

recognizes the 2-D barcode on the profile or mark form recognition sheet, fully indexes the accompanying document, and names the file. The fully searchable file is forwarded to the user-defined destination, including FTP address, email, printer, network or local folder and the user's desktop.

The complete profile is stored in one of two 2d barcodes printed on the separator page.

Each barcode may store up to 1500 ASCII characters

- The user simply:
1. Places the printed separator page on top of document
 2. Scans in the document accompanied by the separator page
 3. Goes about their business

EZdocs Document Filing...

automatically creates & manages a custom designed Windows folder structure complementing a paper filing method.
